Learn how to banish belly fat!

If you're like the millions of people who suffer from a flabby belly full of fat, you probably have been told that there's nothing you can do. Or you've been told to eat like a rabbit, eating only carrots and lettuce and drinking lemon juice with cayenne pepper. The truth is, there is no need to starve yourself or gulp down acid to kill your hunger. It is as simple as adding certain foods to your diet, or doing particular exercises.

For the past 10 years, Wesley Virgin has studied men and women in their 30's, 40's, 50's and even 60's who were all over 200 pounds. And these were women who had several children, men who enjoyed drinking beer and all of them were fast food junkies. And after using a Wesley's daily short workout regimen and implementing the right foods in their diet, 88% of them lost more than 50 lbs and some showed signs of a six pack or the others had a flat belly.

Create an alkaline body to achieve maximum weight loss!

A surprising number and variety of obesity problems and metabolic diseases can be caused by acidity. Today, the vast majority of the populace in industrialized nations suffer from problems caused by acidification, because both modern lifestyle and diet promote acidification of the body's internal environment. In general, the current standard diet is primarily composed of acidic or acidifying elements.

Alkaline foods such as vegetables are eaten in much smaller quantities; their alkaline content is insufficient to neutralize surplus acids. Stimulants like tobacco, coffee, tea and alcohol are also extremely acidifying. Stress and physical activity also cause acidification.

You can completely reverse your body from being very acidic after years of doing and eating the wrong things, to a body that is alkaline filled with energy and vitality; turning your body into a fat burning machine on auto pilot. In [The Fat Diminisher System](#), you will learn if your body is currently acidic or alkaline, and how to achieve alkalinity.

Uncover the #1 killer in the food industry!

Every time you make a meal out of a box, or a can, you are feeding yourself and your family harmful additives and preservatives that are slowly making you sick, fat, and can ultimately kill you. Processed foods are easily the most dangerous substance you can put in your body! The foundation of most

processed foods in grocery stores today spring from laboratories, not nature. Genetically-modified organisms (GMOs), which have been linked to infertility, organ damage, and cancer. Excessive amounts of these foods entail weight gain, pollutes your blood stream, and can permanently effect the composition and function of your intestines.

These foods have been disassembled: their natural fibers, enzymes, vitamins, have been altered and removed so the foods will live longer on the shelf. They're processed to wreak havoc on your digestive system. Consumption of packaged foods will pollute your internal ecosystem, disrupting beneficial bacteria and increasing infection. Those Oreos and steak off the Applebee's menu are poison!

By following [The Fat Diminisher System](#), you will learn an easy trick how to ensure your body is receiving the proper nutrients while still getting enjoying delicious meals.

Replenish your body with water-rich fruits and vegetables also provide you with natural sugars, amino acids, mineral salts and vitamins that are lost in exercise. The study found that this combination helps hydrate you more effectively than water or sports drinks!

Discover the top 6 WORST vegetables to eat!

Pesticides have been linked to a wide range of human health hazards, ranging from short-term impacts such as headaches and nausea to chronic impacts like cancer, reproductive harm, and endocrine disruption.

Acute dangers - such as nerve, skin, and eye irritation and damage, headaches, dizziness, nausea, fatigue, and systemic poisoning - can sometimes be dramatic, and even occasionally fatal.

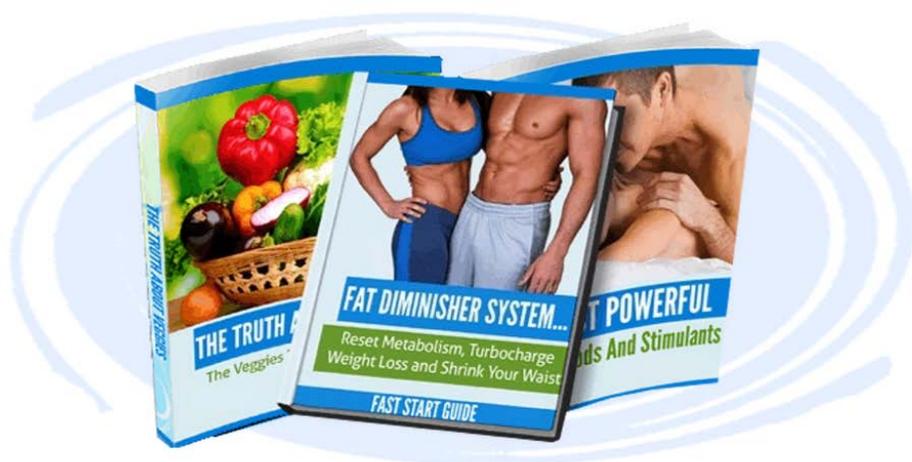

Pesticides can cause many types of cancer in humans. Some of the most prevalent forms include leukemia, non-Hodgkins lymphoma, brain, bone, breast, ovarian, prostate, testicular and liver cancers. In February 2009, the Agency for Toxic Substances and Disease Registry published a study that found that children who live in homes where their parents use pesticides are twice as likely to develop brain cancer versus those that live in residences in which no pesticides are used.
